APOLLO TYRES × ACC CASE COMPETITION, ROUND 3

Win the first replacement

How Apollo Tyres can turn the Team India jersey into tractor-tyre sales in rural India, affordably and measurably

A proposal in twelve slides, with an appendix · November 2026

Apollo should win the first tyre replacement with a guaranteed tyre life and a paid dealer and mechanic, using the jersey as its mark of trust

1 The prize is real, and Apollo is under-weight in it

- Apollo is fitted at the factory, but holds only about 9%* of tractor-tyre replacement against about 20% in car tyres
- Each point of replacement share is worth about Rs 33 crore of revenue a year
- Fourteen months in, the jersey has not moved searches: Apollo 14.0% to 14.8%, MRF steady at 47%

2 Owners buy tyre life on a trusted person's word

- A stated number of hours, guaranteed, with the claim paid at the dealer within seven days, at today's price
- Rs 300 to the mechanic and Rs 400 to the dealer for each extra rear tyre, plus harvest-timed credit
- "Team India's sponsor" at the counter; match tickets and team shirts as rewards for the trade

3 It pays at one point of share, and a test sizes the rest

- The national offer costs about Rs 7 crore a year and pays for itself at one point of share
- Field teams must add about five points in a dense tehsil to pay, and cricket events three more
- A four-arm test in 30 districts from 21 January 2027 decides both, at gates in August 2027 and January 2028

Rs 11 crore
to March 2028, released in tranches at gates

1 point
of national share pays for the offer

Rs 82 crore
extra revenue in FY29, base case*

~12.5%
replacement share at March 2029, from ~9%*

Rs 10 crore
most that can be lost, as gates stop what fails

So what Farm borrows the jersey's standing and pays only to use it: the guarantee and the trade do the selling, and cricket is the mark of trust.

Sources: team analysis; CRISIL in the Tolins Tyres prospectus (Aug 2024); Motilal Oswal note of a meeting with Apollo management (27 Dec 2025); Google Trends, eight states. * Computed on one broker note or on planning assumptions; the share gains are assumptions, not forecasts.

Apollo's tractor tyres are fitted at the factory and lost at the first replacement, where each point of share is worth about Rs 33 crore a year

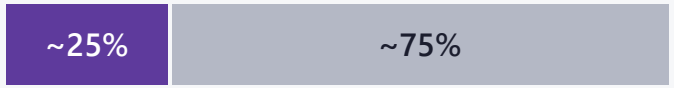

1 FITTED

Apollo sells mostly to tractor makers, unlike the industry

Industry: domestic tractor tyres, FY24

Apollo's farm sales, exports included*

Replacement

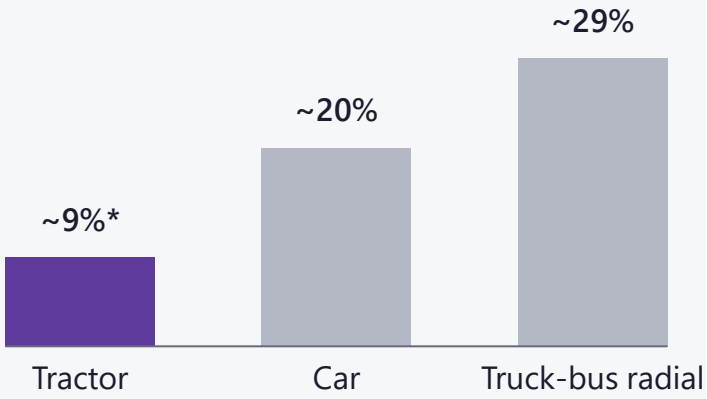

Tractor makers (and export, for Apollo)

Only 38% of owners chose the tyre brand on their new tractor.

2 LOST

Its share of replacement is less than half its share in car tyres

Apollo's replacement share, by category

Where owners saw uneven wear, only 18% meant to buy that brand again.

3 WORTH

Closing half the gap to its car-tyre share adds about Rs 200 crore a year*

Replacement share to 12%

+Rs 100 crore

To 15%: half the gap to car tyres

+Rs 200 crore

To 20%: its car-tyre share

+Rs 360 crore

Extra revenue a year against ~9% today

Market about Rs 3,300 crore (2,500 to 4,000)*. Each point: Rs 33 crore of revenue, about Rs 10 crore of contribution.

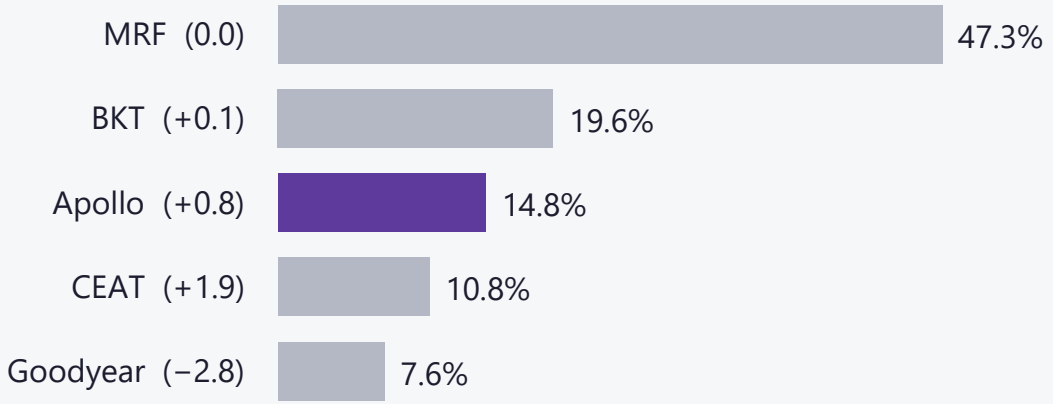

So what The problem is winning back owners at the first replacement, not awareness on new tractors. Apollo can confirm the 25% and the 9% from its own books in a week.

Sources: CRISIL in the Tolins Tyres prospectus (Aug 2024); Motilal Oswal note of a meeting with Apollo management (27 Dec 2025); Apollo FY26 annual report; broker notes (car, truck shares); J.D. Power 2018 India tractor tyre study. * Rests on one broker note, or on planning assumptions.

The jersey has not moved tractor-tyre demand in fourteen months, and cricket already belongs to MRF, CEAT and BKT

Apollo barely moved; CEAT gained more without a jersey

Share of five brands' tractor-tyre searches after the jersey, % (change in points against the year before)

By state, Apollo rose in Haryana (10 to 15) and fell in Maharashtra (18 to 14); in Punjab and Uttar Pradesh it barely moved.

Rival tyre brands have held cricket for decades

1987	MRF founds its pace-bowling academy
1995	CEAT starts its cricket ratings and awards
2014	MRF on Kohli's bat (Tendulkar's before him)
2015	CEAT takes the IPL strategic time-out
2020	BKT's IPL deals begin: 8 of 10 teams by 2026
2025	Gill moves his bat deal from CEAT to MRF
Sep 2025	**Apollo becomes lead sponsor of Team India**

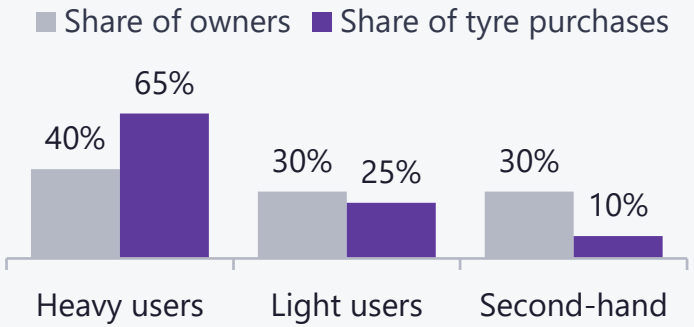

Reach is thinnest where owners are most numerous: in Uttar Pradesh 42% of men watch TV weekly. Apollo's 2025-26 "Champions offer" of tickets and team shirts covered car and motorcycle tyres only.

So what More cricket exposure is not the answer for farm. Attach the name where no rival can claim it: at the counter, on the guarantee card and on the tyre.

Sources: Google Trends, tractor-tyre searches for five brands in eight states, 1 Sep 2024 to 5 Nov 2026 (team count; online owners only; a signal, not a survey); MRF, CEAT, BKT and BCCI announcements; NFHS-5 state reports (2019-21); Apollo "Champions offer" terms.

Owners buy on tyre life and on the word of a dealer or mechanic, and four in ten owners make about two-thirds of purchases

Heavy users carry the purchases*

- **Target 1:** heavy users, 600 to 1,000 hours a year, who plan purchases
- **Target 2:** owners of tractors that left the factory on Apollo tyres
- **Advisers:** the dealer and the mechanic
- **Not targeted:** small second-hand owners who buy on price

Where Apollo drops out of the purchase, and what the plan changes

	In mind	Advice	At the counter	After purchase
Planned heavy users	Tyre on the tractor, MRF, what the shop stocks	Other owners, the mechanic, market videos	Price per pair, guarantee years, credit	Hours achieved; claim honoured or not
Urgent a tyre fails	A cut, burst or bald tyre in season	Mechanic: repair, retread or replace	Nearest shop with stock	The same test of tyre and claim
Apollo today	Fitted, but 14% of searches against MRF's 47%	No mechanic programme; praise rarely gives a reason	No farm offer at the counter	No buyer record; refused claims top complaints
The plan	Sponsor's mark; camps find Apollo-fitted tractors	Rs 300 to the mechanic for each rear tyre referred	Hours guarantee, Rs 400 dealer bonus, harvest credit	Claim paid in seven days; buyer kept on record

So what Aim at heavy users and at the advisers, and make tyre life a promise that is paid at the counter.

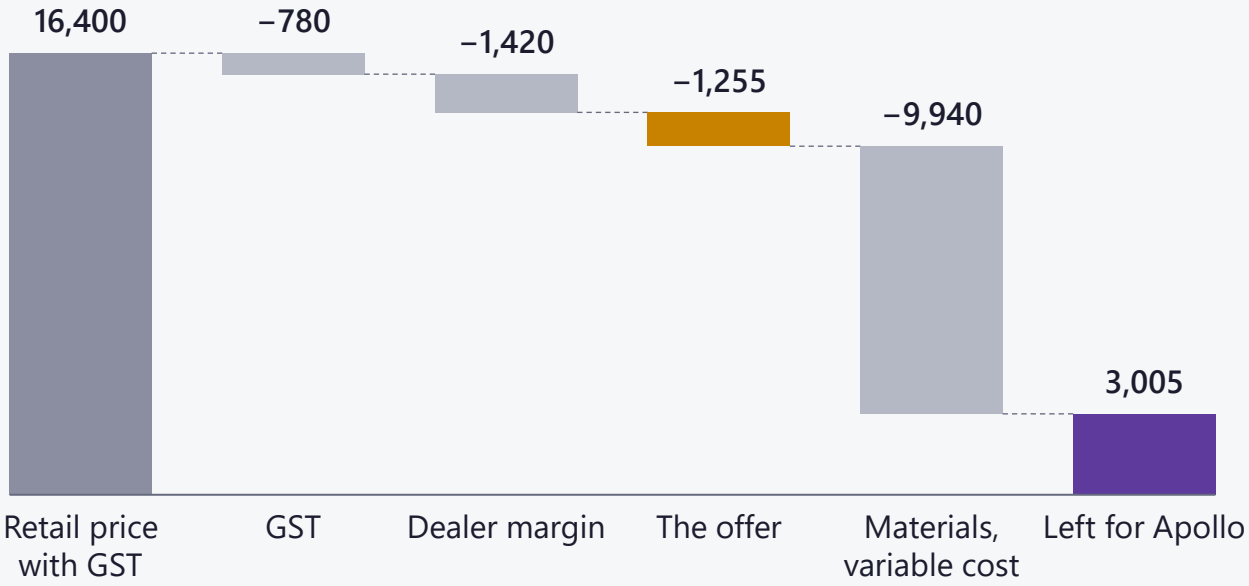

Sources: Kaur (2024), survey of 520 households in the Punjab cotton belt, 2016-17 (* segment sizes indicative); J.D. Power 2018; 131 coded brand comments under 30 Hindi and Punjabi videos (team count; not a survey); McKinsey consumer decision journey (2009), adapted.

Guarantee the hours and pay the dealer and mechanic for each extra tyre: the offer costs Rs 1,255 and still leaves about Rs 3,000 a tyre

The Lambi Paari guarantee* ("the long innings")

Promise	A stated number of hours on rear Virat tyres, set from Apollo's own wear data
Shortfall	Credit for the unused hours toward a new Apollo tyre
Settlement	At the home-ground dealer, within seven days
Conditions	Registered with an hour-meter photo; pressure checked each season; cuts and quarry haulage excluded
Price	Unchanged: Apollo already lists 6 to 10% below MRF
Value	At an equal 2,000 hours: Apollo Rs 8.00 an hour, MRF Rs 8.84
Precedent	Trelleborg launched an hours guarantee in Europe in February 2026; none exists in India

What one extra rear tyre leaves Apollo, Rs*

The offer per rear tyre: mechanic Rs 300, dealer Rs 400, credit Rs 225, guarantee reserve Rs 280, registration Rs 50 (about 9% of price)

So what The offer is funded and needs no price cut: it costs money mainly when an extra tyre is sold, and every buyer is registered.

Sources: tractor-portal prices for 13.6-28 rear tyres (viewed 6 Nov 2026); Trelleborg guarantee terms (25 Feb 2026). * Planning assumptions: 10% dealer margin; variable cost 70% of Apollo's invoice; 5% of guaranteed tyres claim at a 25% credit, so 2% is reserved.

Use the jersey where it cannot be mistaken: as the trust mark at the counter and as rewards for the trade

Cricket activity	Reaches	Link to sales	Cost	Verdict
Logo on the shirt, on television	Owners who watch	Low	Sunk	Keep
Sponsor's mark on boards, cards and tyres	Every buyer	High	Low	Back
Tickets and team shirts for the trade	Dealers, mechanics	High	Low	Back
Tractor makers hosted at home Tests	Few, high value	Medium	Low	Back
Hindi and Punjabi videos on tyre life	Owners online	Medium	Low	Back
Match screenings at dealers	Local	Unknown	Low	Test
One existing village tournament a tehsil	Local, seasonal	Unknown	Medium	Test
New Apollo tournaments with finals days	Local	Unknown	High	Drop
Farm film on television during cricket	Owners who watch	Low	High	Drop
Player appearances for farm	Few	Low	High	Drop
IPL team deals	Wide, crowded	Low	High	Drop

What only the sponsor has

Standing at the counter, and rewards the trade cannot buy elsewhere.

Proof the rewards can be used

Apollo's 2025-26 "Champions offer" gave match tickets, player meetings or fan shirts to buyers of car and motorcycle tyres. Farm was left out.

Ask at the 2028 renewal

A trade allocation of tickets and shirts; the team's marks at the shop and on the tyre; regional-language content.

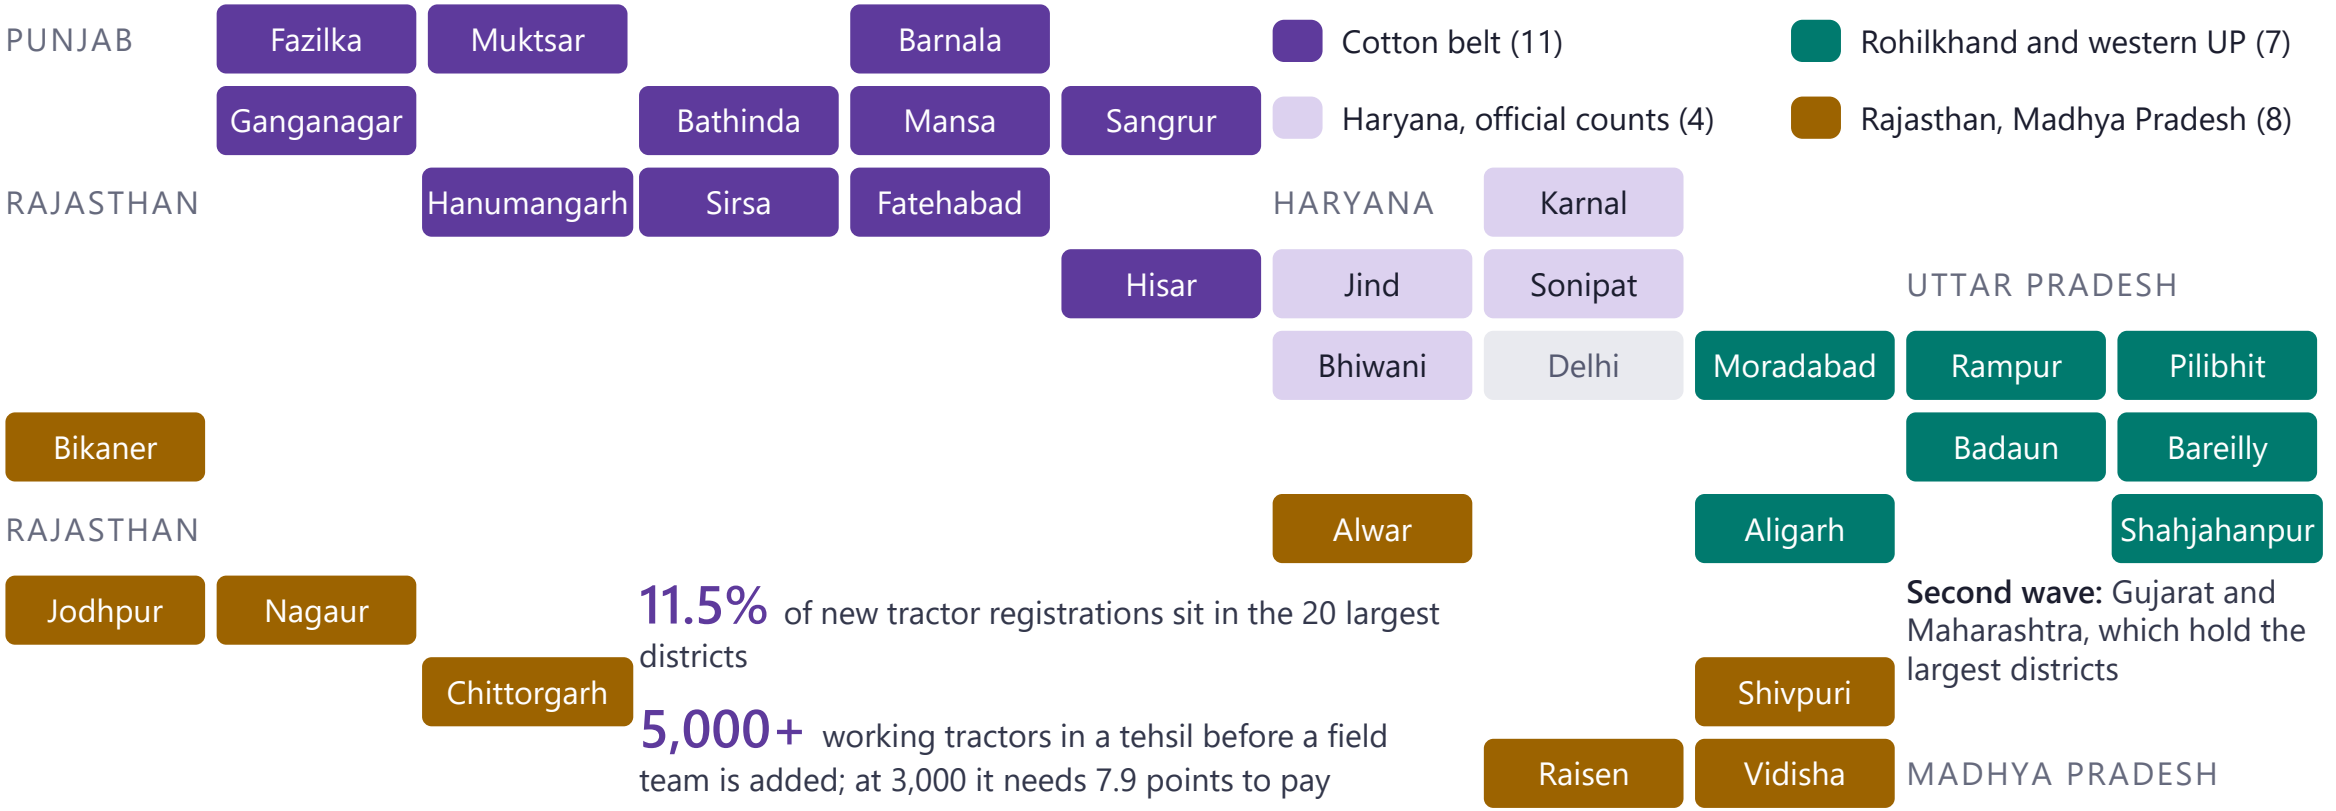

Renewal test for farm

Cricket must add about two points of share beyond the offer: farm's Rs 14 crore share of the fee against Rs 7.4 crore a point.

So what Back the cheap uses that only the sponsor has, test match days and village tournaments, and drop finals days, films, appearances and IPL deals.

Sources: team scoring on public evidence, using the five measures in McKinsey, "Is sports sponsorship worth it?" (2014); Apollo "Champions offer" terms (7 Dec 2025 to 31 Mar 2026); NFHS-5; fee of Rs 579 crore as reported by the press, farm's share at 6% of Indian revenue.

The prize is spread across India, so the offer goes national, and field teams go only to dense tehsils in 30 first-wave districts

So what Geography picks where to test and where to add field teams, not where to sell: the guarantee and trade terms run at every Apollo farm-tyre dealer.

Schematic tile map: each district placed by its headquarters' latitude and longitude; not to scale, no boundaries. Sources: tractor portal reports of transport-ministry registrations (FY25); Statistical Abstracts of Haryana (2022-23) and Punjab (2025); NFHS-5; team analysis (first wave is a planning assumption).

On the ground, a home-ground dealer, eleven mechanics and two tyre camps a year do the selling, timed to India's matches and the buying seasons

Dealer's counter, in town

Who: Home-ground dealer, with Apollo rural sales

Sponsor's board; registers each guarantee; settles claims in seven days; Rs 400 per extra rear tyre

Partner: Finance partner for six-month harvest credit

Mechanics, in villages

Who: Eleven enrolled per dealer

Rs 300 for each rear tyre referred, paid to the phone at registration; one meet a year

Partner: Puncture shops and tractor mechanics

Tyre health camps

Who: Coordinator (one per ten tehsils), with the dealer

Two a year, before each buying season: pressure and wear checks; finds Apollo-fitted tractors

Partner: Tractor makers' dealers, Mahindra first

Cricket moments

Who: Sponsorship team, with BCCI approval

Match screenings at dealers; one village tournament; tickets and shirts as trade rewards

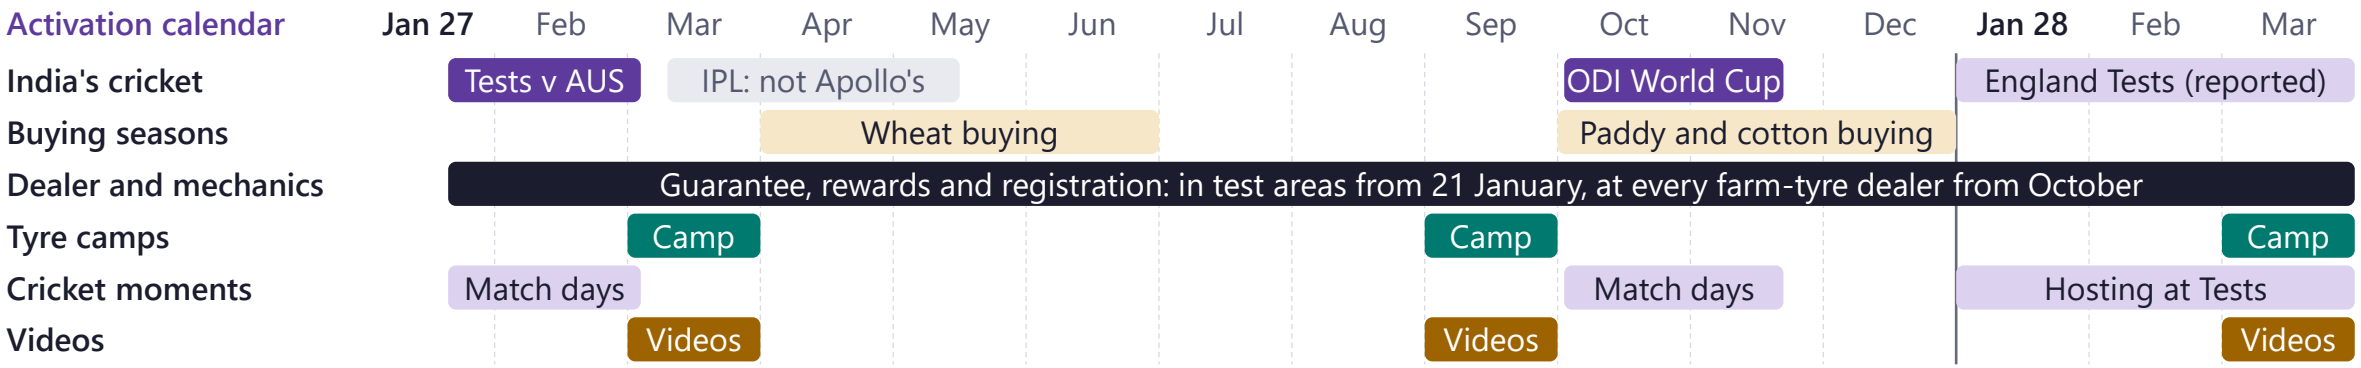

Partner: Local tournament organisers

Digital and media

Who: Farm marketing team

Short Hindi and Punjabi videos on tyre life before each season; messages to registered buyers; no farm TV

Partner: Agricultural university tyre-life trial

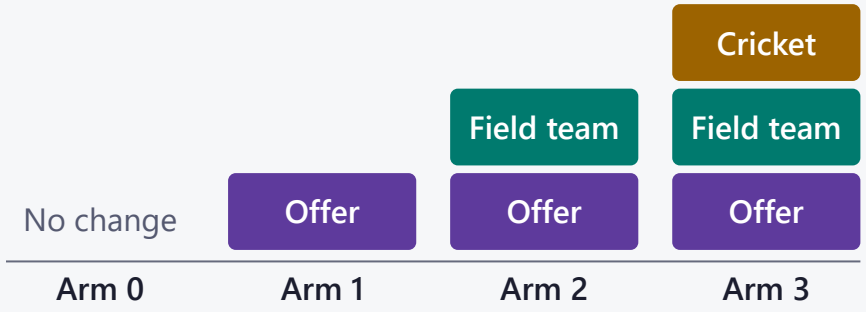

So what Every activity is tied to a registered sale or a buying season, and cricket moments sit only where India actually plays.

Sources: team plan (planning assumptions); BCCI home season (five Tests v Australia, 21 Jan to 3 Mar 2027); ICC Men's ODI World Cup (2 Oct to 21 Nov 2027); England Tests in early 2028 as reported; IPL dates forecast. Cricket moments run first in the test's cricket arm.

Four arms in 30 districts separate what the offer, the field team and cricket each add, measured on Apollo's own billing

One tehsil for each arm in every district, drawn by lot

30 districts, about 116 tehsils, about 29 in each arm

- **Arm 1 against 0:** does the offer work alone?
- **Arm 2 against 1:** does the field team pay?
- **Arm 3 against 2:** does cricket pay?
- Same district, same weather and prices; difference-in-differences on 24 months of billing

From recall to sales: what is measured, against what baseline

Stage	Measure	Baseline	Source, how often
Recall	Unaided first mention of Apollo; jersey credited to Apollo	Survey, Jan 2027	40 owners a tehsil: Jan, Jul, Dec
Belief	Apollo "lasts as long as MRF"	Survey, Jan 2027	Same survey
Advice	Dealers and mechanics recommending Apollo	Survey, Dec 2026	Mystery visits each season
Sales (gate)	Apollo farm replacement sales per tehsil, in points of share	24 months of billing	Billing monthly; registrations
Retention	Apollo-fitted tractors replaced on Apollo	Camp register	Each camp
Guarantee	Claims as a share of covered sales: 2% reserved, pause at 4%	Starts at zero	Claims system, monthly

The test can detect a sales gain of 1.6 to 2.6 points of share and about 7 points of first mention. Recall explains; sales decide the gates.

So what Every gate is read on Apollo's own sales data, and each layer of spending has its own comparison group.

Sources: team design (planning assumptions). Detectable differences computed for 29 tehsils an arm paired within districts, and 1,160 owners an arm with a design effect of 2.95 (intra-cluster correlation 0.05); to be re-run on Apollo's billing before launch.

The offer pays at one point of share; a field team must add five points and cricket three more, and the worst case loses about Rs 10 crore

Points of share each layer must add to pay its full cost*

National offer
Rs 7.0 crore a year, mostly per tyre sold

1.0 point nationally

About 9,700 more rear pairs a year across India

Field team
Rs 2.06 lakh a tehsil a year

4.7 points in the tehsil

One more rear pair a fortnight, where Apollo sells one a week

Cricket layer
Rs 1.30 lakh a tehsil a year

3.0 points more

Three more rear pairs every two months

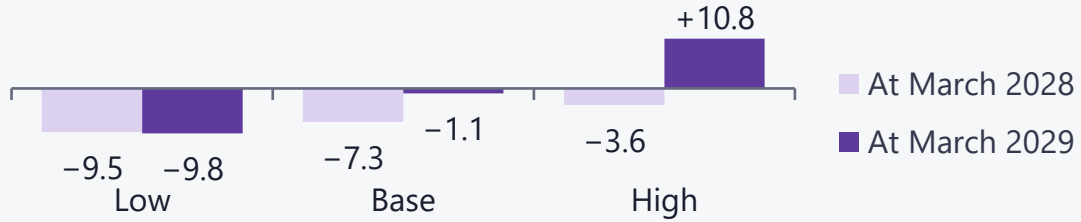

Full-cost break-even | Gate set in the test (2, 5 and 3 points)

One point: Rs 33 crore of revenue, Rs 7.4 crore of net contribution a year.

Three cases, if the gates work as designed*

	Low	Base	High
What passes its gate	Offer only	Offer and field teams	All three
Share gain in FY29	1.0 point	2.5 points	4.0 points
Share at March 2029	~10.5%	~12.5%	~14.5%
Extra revenue, FY29	Rs 33 crore	Rs 82 crore	Rs 132 crore
Spend to Mar 2028, FY29	11.0, 7.7	11.0, 12.2	11.0, 15.1

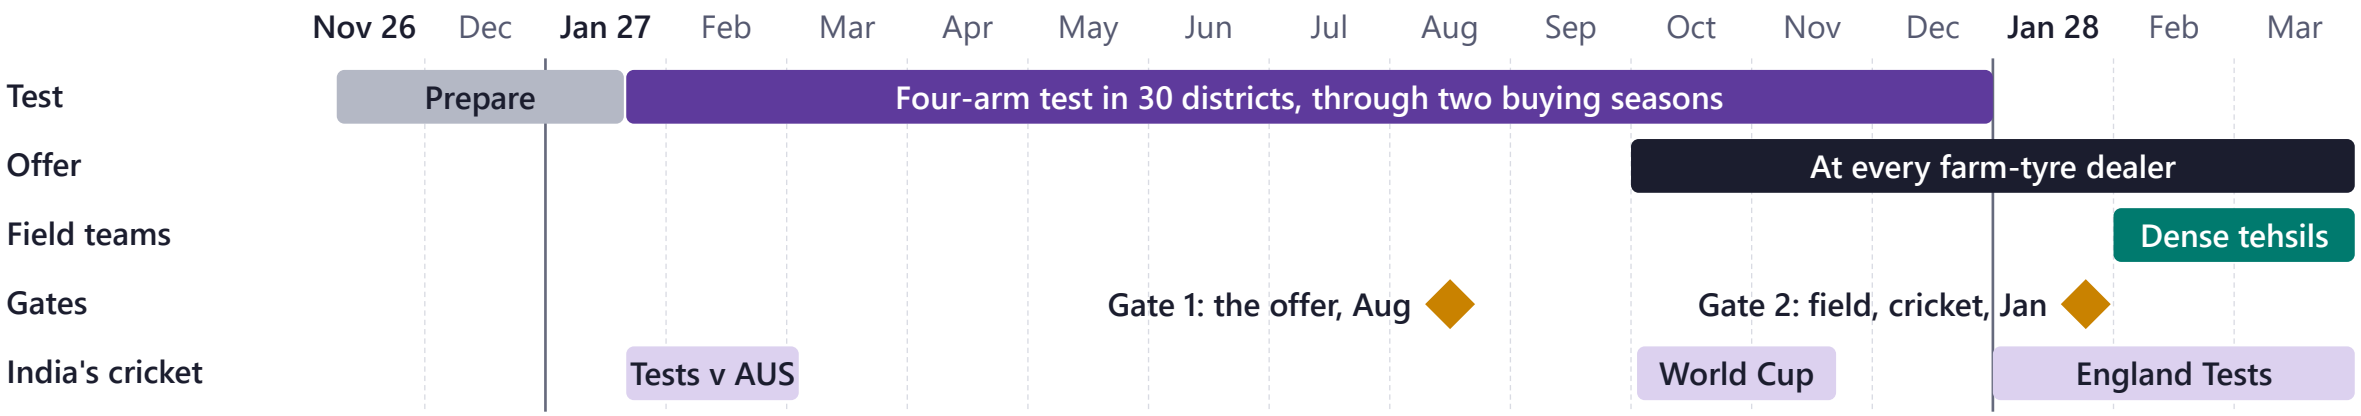

Cumulative result, Rs crore

So what No case pays back by March 2028; the base case turns positive in FY29 and recovers its outlay early in FY30, and the gates cap the loss.

Sources: team analysis. * Planning assumptions: market Rs 3,300 crore; 30% contribution before the programme; offer cost Rs 1,255 a rear tyre; reference tehsil of 5,000 working tractors. The share gains are assumptions, not forecasts; no analogue gives a benchmark for a tyre maker.

The test starts on 21 January 2027 and both gates fall before the sponsorship ends, so scale and renewal are decided on evidence

Prepare
Nov 2026 to 20 Jan 2027

Apollo's data in two weeks; ~300 tonnes ring-fenced; contract and legal checks; tehsils drawn; dealers briefed, mechanics enrolled; baseline survey

Rs 2.8 crore

Test
From 21 Jan 2027

30 districts, ~116 tehsils, four arms; two buying seasons and two India windows; each read-out checked independently

Rs 5.2 crore, from April

Gate 1: offer national
Aug, then Oct 2027

At 2+ points with claims within 2%, the offer goes to every farm-tyre dealer. At 1 to 2: a second season in 30 districts. Below 1: stop

Rs 3.0 crore

Gate 2: field scale
Jan 2028 on

Field teams in up to 200 dense tehsils at 5+ points; cricket events at 3+. Else keep per-tyre rewards and the mark. Results feed the renewal

FY29: Rs 7.7 to 15.1 crore

So what The strategy does not wait for the test; only the optional field and cricket spending does.

Sources: team plan (planning assumptions); fixtures as on slide 8. The sponsorship ends in March 2028; both gates fall before it, so the renewal can use the results.

The ask: Rs 11 crore to March 2028 released against gates, a supply decision now, and Apollo's own data within two weeks

Budget, Rs crore*

Item	FY27	FY28	FY29 if passed
Set-up: legal, guarantee system	1.30	–	–
Surveys and independent review	0.56	1.61	In tracking
Test field costs, about 58 tehsils	0.34	1.45	–
Team, content, tyre-life trial	0.30	1.70	–
National offer, from October 2027	–	2.75	7.00
Field teams, 200 dense tehsils	–	–	4.12
Cricket layer, 200 tehsils	–	–	2.60
Contingency, 10%	0.25	0.75	0.70 to 1.37
Total	**2.8**	**8.3**	**7.7 to 15.1**

Rs 11 crore over seventeen months is about 2% of one year's advertising and promotion spend (Rs 524 crore in FY26).

Six decisions, each with a date

Nov 2026	Release tranche 1, Rs 2.8 crore, on approval of the plan
20 Nov 2026	Pull Apollo's data to confirm the 9% and set the guarantee's hours
4 Dec 2026	Ring-fence about 300 tonnes of farm tyres for the test; build no new farm line
21 Jan 2027	Launch the four-arm test; tranche 2, Rs 5.2 crore, in April if on time
Aug 2027	Gate 1: take the offer national at two points; tranche 3, Rs 3.0 crore
Jan 2028	Gate 2: fund field teams at five points and cricket at three, for FY29

So what The most that can be lost is about Rs 10 crore, if only the offer passes and it gains one point.

Sources: team budget (* planning assumptions; unit costs re-used from the first analysis and re-sized); Apollo FY26 annual report (advertising and promotion spend). Gates as on slides 9 and 10.

Market build: about 7.7 million tractor tyres a year, half of them replacement, worth about Rs 3,300 crore; the extra tyres need no new line

Domestic tractor tyres, million (CRISIL)

	FY19	FY20	FY21	FY22	FY23	FY24
To tractor makers	3.5	3.1	3.9	3.8	4.3	3.8
Replacement	2.8	2.2	2.3	3.5	3.7	3.9
Total	**6.3**	**5.2**	**6.2**	**7.4**	**8.0**	**7.7**
Replacement share	44%	42%	37%	47%	46%	51%

- Replacement tyres in FY26: 3.9 to 4.6 million*, at an average realisation of about Rs 8,500* (half rear, half front): Rs 3,300 to 3,900 crore. Working figure Rs 3,300 crore (Rs 2,500 to 4,000 crore), as cheap tiers pull the average down
- Working tractors about 8.5 million (7 to 11 million)*: about 0.5 tyres and Rs 3,900 a tractor a year
- Apollo's farm revenue about Rs 1,200 crore (6% of Indian revenue); about 25% replacement, about Rs 300 crore, about 9% of the market*

Tyres needed, and where they come from

Need	Tyres	Tonnes	When
The test	~8,000	~300	Feb to Dec 2027
Base case, +2.5 points	~97,000	~3,600	FY29
Aspiration, +6 points	~250,000	~9,300	FY30

- Even 9,300 tonnes is 1.3% of Apollo's 732,097 tonnes of production in FY26
- A new farm line would cost Rs 430 to 790 crore for Rs 60 to 110 crore of contribution a year: no
- Instead: first call on farm tyres for test and priority dealers now; the farm output moving from the Dutch plant in FY28; debottlenecking decided at Gate 1; outsource only tyres outside the guarantee
- Rule: no tyre goes under the guarantee unless Apollo made it and holds its wear data

Sources: CRISIL industry chapter in the Tolins Tyres prospectus (Aug 2024); Apollo FY26 annual report; broker notes on capacity (Dec 2025, Q1 FY27); tyre weight from one retailer listing (low reliability); team analysis. * Computed on planning assumptions.

Programme costs by layer, and how the FY29 result moves when one assumption changes

National offer, Rs crore a year

Guarantee reserve on existing sales	2.5
Registering existing buyers	0.5
Team, claims system, content	2.5
Tracking research	1.0
Videos, board upkeep	0.5
Total a year	**7.0**
One-time: boards at ~2,000 dealers	1.0

Field team, Rs lakh a tehsil a year

Dealer farm corner upkeep	0.15
One mechanic meet	0.25
Two tyre health camps	0.30
Coordinator, one-tenth share	0.48
Messaging and system	0.13
Fixed cost	**1.31**
Full, with team and measurement	**2.06**

Cricket layer, Rs lakh a tehsil a year

One existing village tournament	0.50
Tickets, shirts, other rewards	0.40
Match days at the dealer	0.20
Sponsor's mark on local boards	0.10
Fixed cost	**1.20**
Full, with content	**1.30**

Base case FY29 result of +Rs 6.2 crore, with one input changed at a time

Share gain 1.5 points, not 2.5	−1.2
Share gain 3.5 points	+13.6
Market Rs 2,500 crore, not 3,300	+1.7
Market Rs 4,000 crore	+10.1
Contribution 25%, not 30%	+2.1
Contribution 40%	+14.5
Extra tyres outsourced, earning 20%	−2.0
Claims at twice the reserve	+2.3
Rivals match; half the gain lost	−3.0

Break-even share gain in FY29: 1.0 point for the offer alone, 1.7 with the field team, 2.0 with all three. The two inputs that matter most are the share gain, which the test measures, and the margin on the extra tyres, which the supply decision sets.

Sources: team analysis on planning assumptions; unit costs re-used from the first analysis and re-sized (proof tractors dropped, the tehsil final dropped, rewards moved to a cost per tyre).

What management would need to believe in the base case (+2.5 points in FY29), and how each belief is settled

#	Belief	In plain terms	Evidence today	Settled by
1	The market is ~Rs 3,300 crore and Apollo holds ~9%	–	One CRISIL chart; one broker note	Apollo's own data, in a week
2	The offer adds ~1.9 points without field teams	Nine or ten more rear pairs a year at each of ~2,000 farm-tyre dealers	An hours guarantee exists abroad; no Indian result	The test's offer-only arm
3	Field teams add five points in 200 dense tehsils	One more rear pair a fortnight in each	None for tyres	The test's field arm
4	Guarantee claims stay within 2% of covered sales	One tyre in twenty claims a quarter of its price	No maker publishes a claim rate	Claims in the test, by dealer
5	~97,000 more tyres can be supplied	~3,600 tonnes: 0.5% of production	Farm tyres are short today	The supply decision, Dec 2026
6	Rivals do not erase the gain within the year	–	No retaliation case found in farm tyres	Mystery visits; rivals' schemes
7	Registered buyers come back	They buy Apollo again	Repurchase falls to 18% after uneven wear	Repurchase among registered owners, FY29

The number of dealerships stocking farm tyres is not public: Data unavailable – requires primary research or company confirmation.

Sources: team analysis; J.D. Power 2018 (repurchase after uneven wear); Trelleborg guarantee (Feb 2026); broker notes on capacity.

Risks and guards, and how rivals may respond

Risks and guards

Risk	Guard
Farm tyres are short and the test starves	Supply decision first; fill rate tracked weekly
The guarantee is abused	Photo at registration and claim; a cap per dealer; quarry and mining excluded
The team's marks or screenings are not allowed	Contract and approvals in weeks 1 to 6; the offer works without them
World Cup marks used by mistake	Team India marks only; tournament marks belong to the ICC
Promotions law differs by state	Legal opinion; no draws of chance; rewards tied to registered sales
A weak farm year hides the effect	Every arm shares the same districts, so the comparison holds
Results read too early	Gate 1 checked for pull-forward; Gate 2 uses two seasons

Likely responses (our judgement)

Rival	Likely move	Apollo's answer
MRF	Dealer schemes where it loses sales	Do not follow on price; settle claims fastest
CEAT	Stretch its warranty wording; more cricket	Registration and settlement speed
BKT	Price and range	Hold the mixed-use tyre
Goodyear	Defend fitment	Work Apollo's own fitted tractors
Retreads	Gain in a weak year (GST now 5%)	Do not chase; credit on the entry tyre

A matching hours guarantee costs most for the brand with the most tyres in use, which is MRF.

Sources: team analysis; GST on retreaded tractor tyres cut to 5% from 1 Nov 2026. No case of one tyre maker answering another's farm-tyre push was found, so the right-hand table is judgement.

What is still unknown, and the sources behind the numbers

Unknown today, and how it is settled

Unknown	Settled by
Apollo's replacement share (the 25% and the 9%)	Apollo's books, in a week
Tyre life in Indian conditions	Wear data; a university trial
Real dealer margins and rivals' schemes	Survey of 40 dealers
Guarantee claim rates	Claims in the test
Reach of cricket among tractor owners	Baseline owner survey
Rights in the contract beyond the logo	Legal review, November 2026
Dealers stocking farm tyres, by district	Apollo's dealer data

For each today: Data unavailable – requires primary research or company confirmation.
